RE: **EX PARTE** in an Inquiry Concerning 911 Access, Routing, and Location in Enterprise Communications Systems, PS Docket 17-239

Dear Ms. Dortch:

Cisco Systems, Inc. ("Cisco") met with the following Public Safety and Homeland Security Bureau staff members on the above captioned docket: David Furth, Kenneth Carlberg, Timothy May, Erika Olsen, Brenda Boykin, Michael Connelly, and Austin Randozzo. Representing Cisco were Dan Keller, Technical Marketing Engineer and Mary Brown, Government Affairs.

We discussed the issues raised by Cisco in its comment filed in the docket, including our view that Wi-Fi could be better utilized to assist in delivering enterprise location. In addition, we discussed the obstacles to the delivery of NENA i3 location information to PSAPs, ways in which those obstacles are currently addressed, and the importance of moving the PSAP community toward implementation of next generation standards. We briefly touched on the pending federal bills known as Kari's Law, and our support for Commission implementation once a bill becomes law.

Respectfully submitted,

CISCO SYSTEMS, INC.
